Convolutional Neural Networks

STEP 1: Convolution

STEP 2: Max Pooling

STEP 3: Flattening

STEP 4: Full Connection

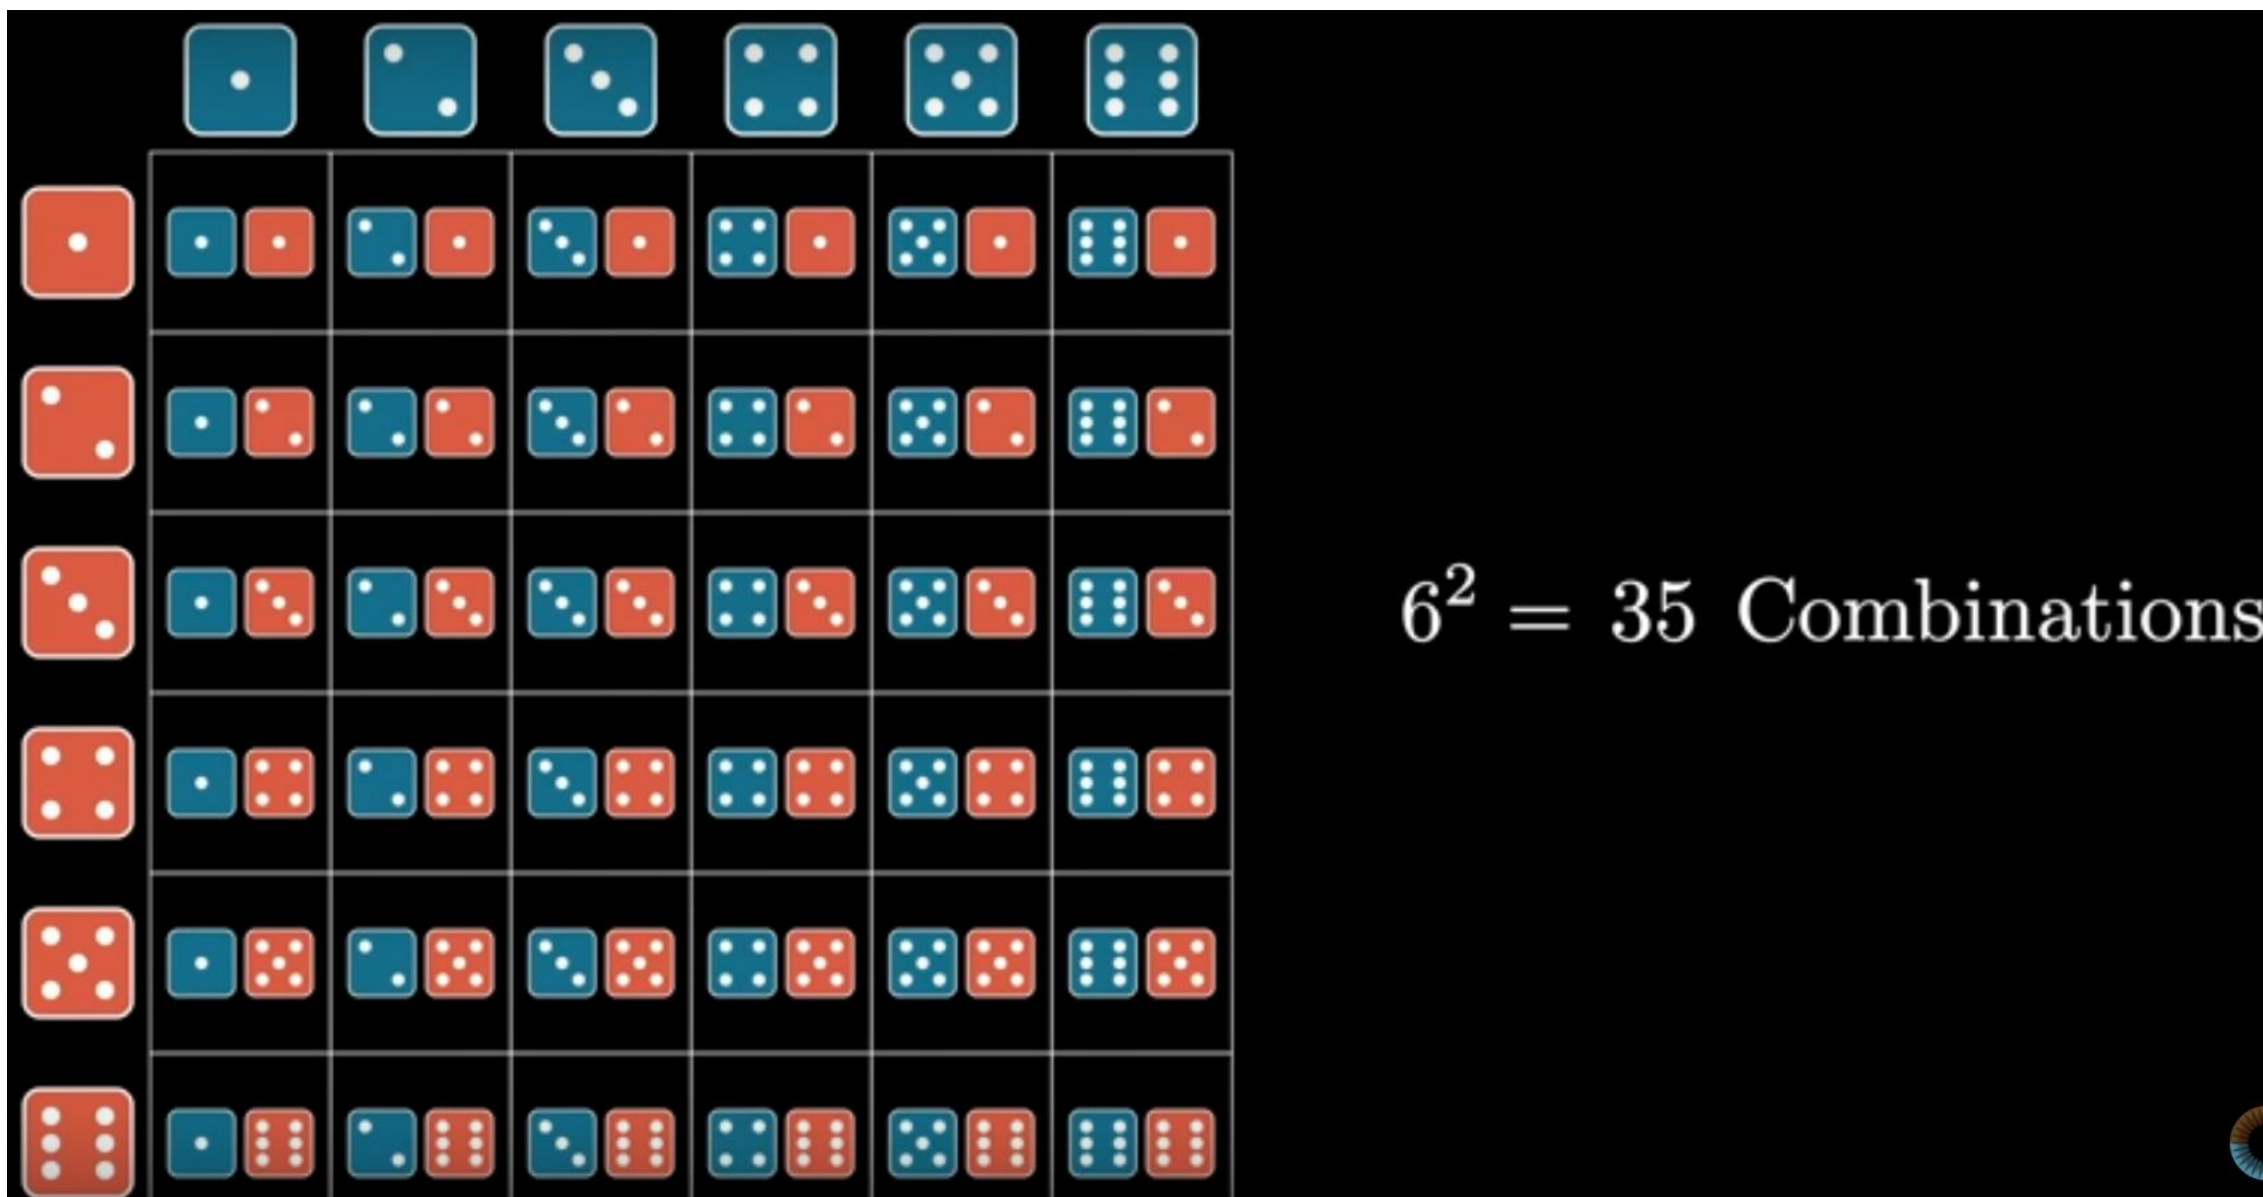

Step 1 – Convolution

Simple Way of Convolution

$$A = [1, 2, 3, 4]$$

$$B = [5, 6, 7, 8]$$

$$A * B = [5, 16, 34, 60, 61, 52, 32]$$

$$P(\text{blue} + \text{red} = 2) = a_1 \cdot b_1$$

$$P(\text{blue} + \text{red} = 3) = a_1 \cdot b_2 + a_2 \cdot b_1$$

$$P(\text{blue} + \text{red} = 4) = a_1 \cdot b_3 + a_2 \cdot b_2 + a_3 \cdot b_1$$

$$P(\text{blue} + \text{red} = 5) = a_1 \cdot b_4 + a_2 \cdot b_3 + a_3 \cdot b_2 + a_4 \cdot b_1$$

$$P(\text{blue} + \text{red} = 6) = a_1 \cdot b_5 + a_2 \cdot b_4 + a_3 \cdot b_3 + a_4 \cdot b_2 + a_5 \cdot b_1$$

$$P(\text{blue} + \text{red} = 7) = a_1 \cdot b_6 + a_2 \cdot b_5 + a_3 \cdot b_4 + a_4 \cdot b_3 + a_5 \cdot b_2 + a_6 \cdot b_1$$

$$P(\text{blue} + \text{red} = 8) = a_2 \cdot b_6 + a_3 \cdot b_5 + a_4 \cdot b_4 + a_5 \cdot b_3 + a_6 \cdot b_2$$

$$P(\text{blue} + \text{red} = 9) = a_3 \cdot b_6 + a_4 \cdot b_5 + a_5 \cdot b_4 + a_6 \cdot b_3$$

$$P(\text{blue} + \text{red} = 10) = a_4 \cdot b_6 + a_5 \cdot b_5 + a_6 \cdot b_4$$

$$P(\text{blue} + \text{red} = 11) = a_5 \cdot b_6 + a_6 \cdot b_5$$

$$P(\text{blue} + \text{red} = 12) = a_6 \cdot b_6$$

Convolution of (a_i) and (b_i)

$$(a * b)_n = \sum_{\substack{i+j=n}} a_i \cdot b_j$$

$$P(\text{blue} + \text{red} = 2) = \frac{1}{36}$$

Artificial Intelligence

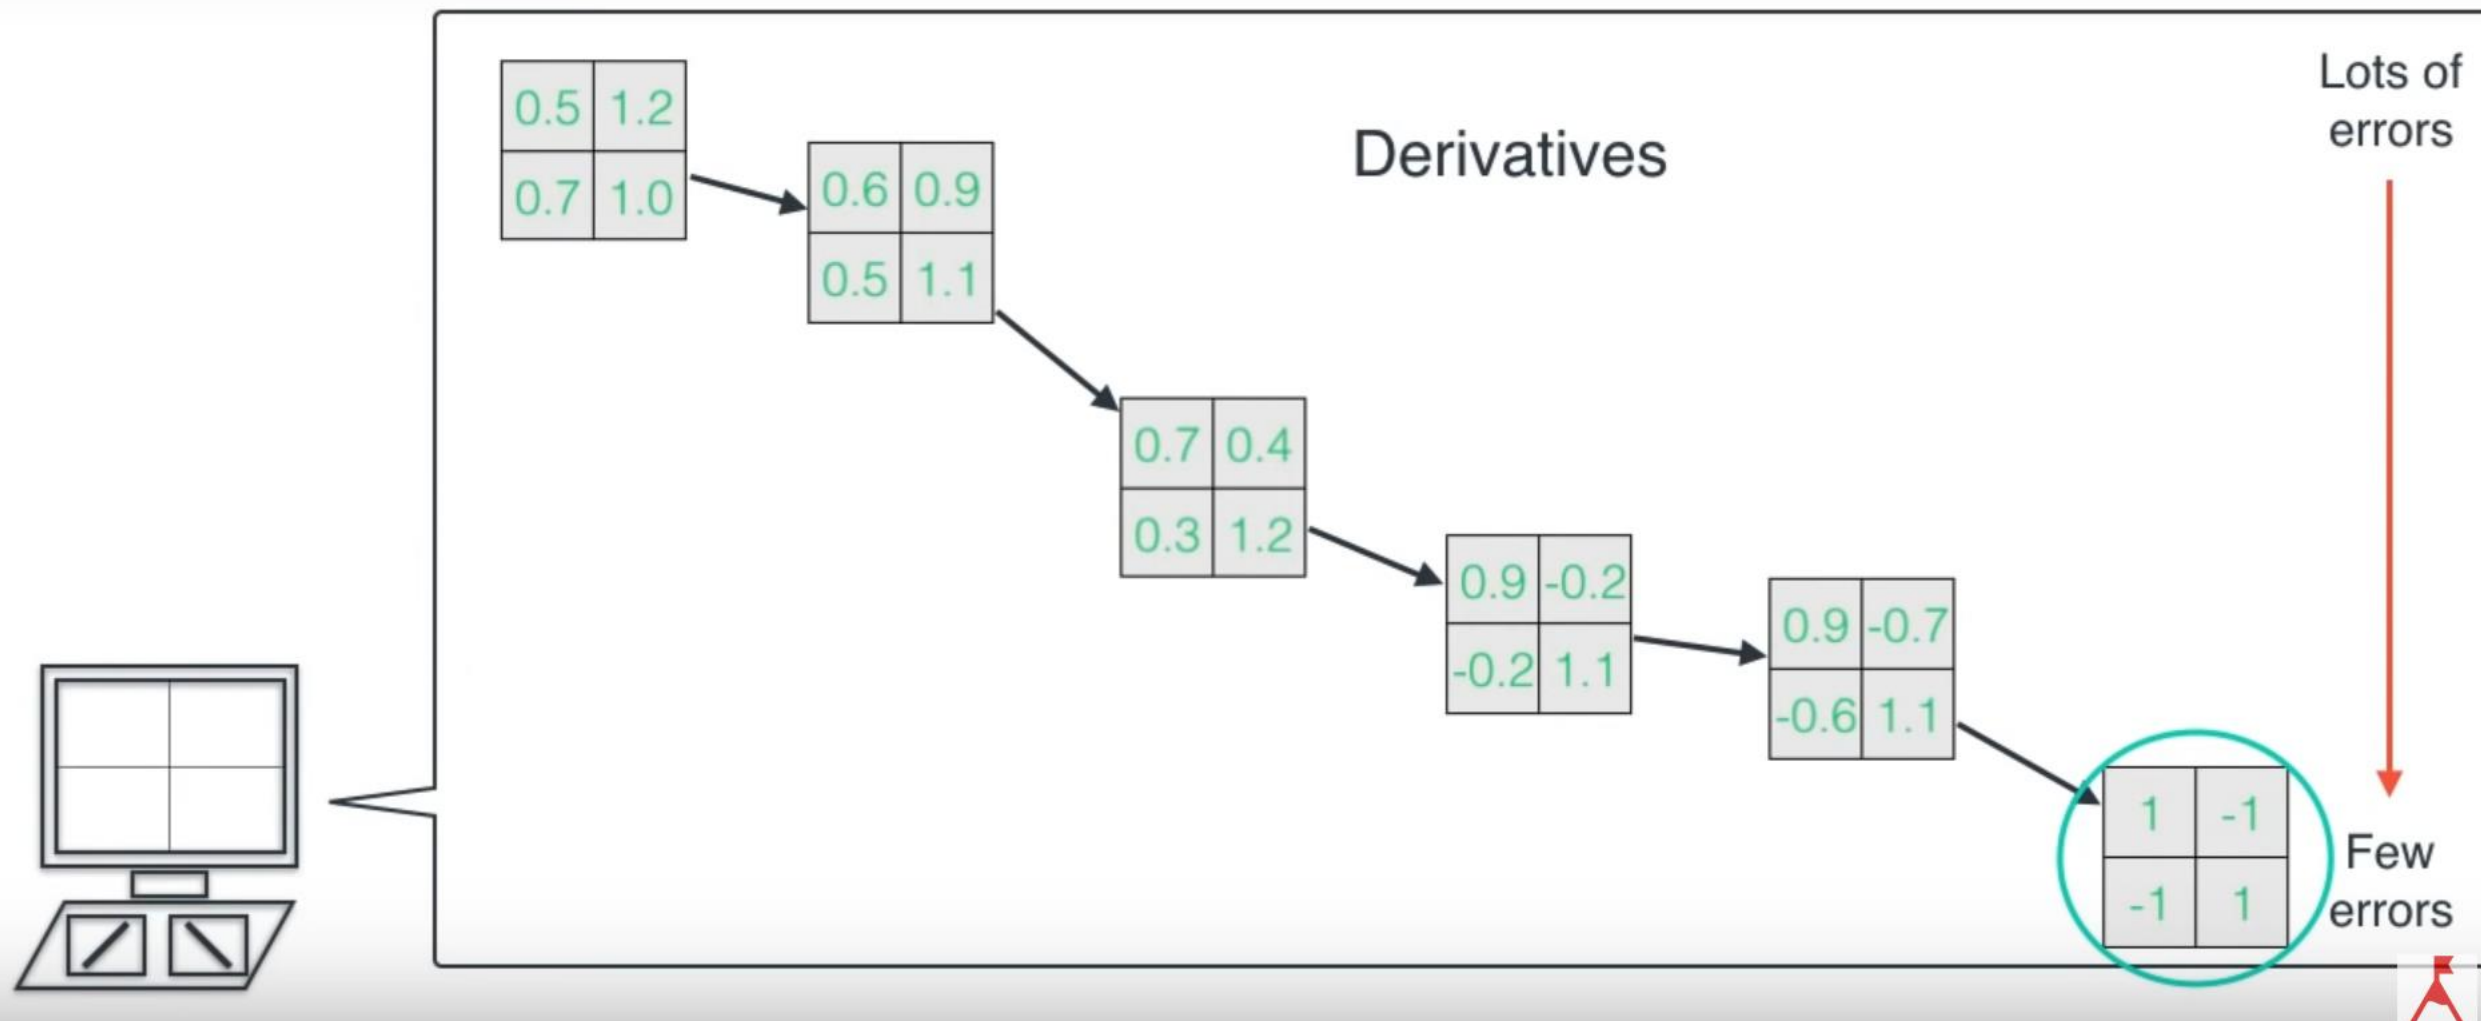

16 choices

Artificial Intelligence

Gradient Descent

CNN

CNN

Image (m) = 6*6 matrix

Kernel (n) = 3 *3 matrix

Output image = (m-n+1) *(m-n+1)

= (6-3+1) * (6-3+1)

= 4 * 4

Issues with convolution

- Image gets shrink
- Touching the edges of the images will be very less comparatively , overlapping occurs in the middle.
- Corner features are not used much in the output

- Solution to issues in convolution

- To solve these issues padding is used
- $(n + 2p - f + 1) * (n + 2p - f + 1)$
- $f \rightarrow$ filter
- $p \rightarrow$ padding size
- $n \rightarrow$ image

$$3+2-2+1 = 4$$
